

FAIZAN ABASS MIR

Senior Network Engineer

+91 94199 39387 | faixanmir21.fm@gmail.com | Srinagar, Jammu and Kashmir

PROFESSIONAL SUMMARY

Network Engineer with 4+ years of progressive experience across network architecture, security, and incident governance, advancing from Network Intern to Senior Network Engineer at Apex Implements. Skilled in WAN/SD-WAN design, firewall and security administration, and end-to-end P1-P4 incident ownership. Proven track record in vendor and SLA management, cross-functional stakeholder leadership, and infrastructure roadmap planning.

CORE COMPETENCIES

- Network Architecture & Connectivity: LAN/WAN design, WAN & SD-WAN deployment, ISP & circuit management, network carrier coordination
- Firewall & Security Administration: Policy implementation, access control, security protocol oversight, compliance management
- Incident Governance (P1-P4): End-to-end ownership of critical incidents, escalation management, root-cause analysis (RCA)
- Vendor & SLA Management: Vendor negotiations, SLA definition & tracking, infrastructure uptime optimization, performance reviews
- Strategic & Technical Leadership: Infrastructure roadmap planning, cross-functional stakeholder management, process improvement
- Additional: Change management, capacity planning, disaster recovery & business continuity, NOC monitoring

PROFESSIONAL EXPERIENCE

Senior Network Engineer

2024 – Present

Apex Implements

- Own end-to-end governance of P1-P4 incidents across enterprise network infrastructure, taking full accountability for critical P1/P2 incidents from detection through resolution and post-incident RCA documentation
- Manage WAN and SD-WAN architecture across multiple sites, ensuring high availability and optimized connectivity with ISPs and network carriers while maintaining uptime SLAs
- Negotiate and manage vendor contracts and SLAs with ISPs, hardware vendors, and support providers; perform proactive vendor performance reviews to ensure infrastructure reliability
- Partner with senior leadership on strategic infrastructure planning, balancing day-to-day technical execution with long-term network roadmap decisions and capital planning
- Design, implement, and maintain firewall policies and security protocols in alignment with organizational security standards and compliance requirements; conduct regular policy reviews and updates

Network Engineer

2022 – 2024

Apex Implements

- Monitored and maintained enterprise network infrastructure, ensuring reliability across WAN links, routers, switches, and firewalls; provided escalation and coordination for P1/P2 network outages
- Supported vendor coordination for circuit provisioning and hardware procurement, and led escalations with ISPs; implemented firewall rule changes and access policies under change-management protocols
- Configured and maintained Cisco switches and routers, applying routing and switching best practices (VLANs, STP, NAT, HSRP)

Network Intern

2021 – 2022

Apex Implements

- Supported enterprise networking operations, gaining hands-on exposure to LAN/WAN infrastructure, NOC monitoring, and incident triage
- Assisted senior engineers with firewall policy reviews, ticket resolution, and network documentation

EDUCATION

Bachelor of Technology in Computer Science & Technology | 2019 – 2023

CERTIFICATIONS & TECHNICAL SKILLS

- Cloud & IT Certifications: AWS Certified Developer – Associate; Microsoft Certified: Azure Fundamentals (AZ-900); Postman API Fundamentals Student Expert
- Networking & Infrastructure: TCP/UDP, IPv4/IPv6, VLANs, STP, routing protocols (ARP, HSRP, NAT, VRFs), Cisco switch/router configuration, NOC monitoring & incident triage, Linux & Windows Server
- Programming & DevOps: Python, Java, JavaScript, SQL, Bash, PowerShell, Git/GitHub, Docker, CI/CD pipelines, REST APIs, SOAP/XML
- Enterprise Platforms: ServiceNow, Jira Service Desk, Salesforce — incident management, ticketing, and workflow orchestration
- Languages: English (Fluent), Urdu (Fluent)

KEY ACHIEVEMENTS

- Demonstrated expertise in P1/P2 incident governance and RCA, ensuring critical infrastructure resilience and continuous improvement from outages
- Proactive vendor management and SLA negotiation, consistently maintaining high infrastructure uptime through performance tracking
- Strategic planning and cross-functional collaboration with senior leadership on infrastructure roadmaps and capital decisions
- Continuous technical development: active in algorithmic problem-solving, full-stack development, and emerging IT/security trends
